1.0		Apr. 15, 2014	New issue	Hank Lin
2.0		Nov. 8, 2021	Revise “Chiplus reserves the right to change product or specification without notice” to “Chiplus reserves the right to change product or specification **after approving by customer**” Delete 5V product Corrected the minimum value of tAS and tWR from 0ns to 1.5ns	Hank Lin
3.0	20240018	Oct. 22. 2024	Corrected the minimum value of tAS and tWR from 0ns to 1.5ns	Hank Lin

GENERAL DESCRIPTION

The CS16FS1616(3/5/W) and CS18FS1616(3/5/W) are a 16,789,216-bit high-speed Static Random Access Memory organized as 1M(2M) words by 16(8) bits. The CS16FS1616(3/5/W) (CS18FS1616(3/5/W)) uses 16(8) common input and output lines and have an output enable pin which operates faster than address access time at read cycle, And CS16FS1616(3/5/W) allows that lower and upper byte access by data byte control($\overline{UB}$, $\overline{LB}$).The device is fabricated using advanced CMOS process,6-TR based cell technology and designed for high-speed circuit technology. It is particularly well suited for use in high-density high-speed system applications. The CS16FS1616(3/5/W) is packaged in 12x20mm 48- pin TSOP1 and 48FBGA, The CS18FS1616(3/5/W) is packaged in a 400mil 44-pin TSOP2 and 48FBGA.

FEATURES

- Fast Access Time 8,10,12,15ns(Max)
- CMOS Low Power Dissipation
  Standby (TTL): 35mA (Max.)
  (CMOS): 28mA (Max.)
  Operating: 110mA (8ns, Max.)
  : 90mA (10ns , Max.)
- Single 3.3±0.3V or 5.0±0.5V Power Supply
- Wide range (1.65V~3.6V) of Power Supply
- TTL Compatible inputs and Outputs
- Fully Static Operation, No Clock or Refresh required
- Three State Outputs
- Data Byte Control(x16 Mode)
  $\overline{LB}$: I/O_0~I/O_7, $\overline{UB}$: I/O_8~I/O_{15}
- Standard 48TSOP1 and 48FBGA Package Pin Configurations for 1M x 16
- Standard 44TSOP2 and 48FBGA Package Pin Configurations for 2M x 8
- Operating in Commercial and Industrial Temperature range.

Absolute Maximum Ratings*

Parameter		Symbol	Rating	Unit
Voltage on Any Pin Relative to V_{SS}	3.3V Product	V_{in}, V_{OUT}	-0.5 to V_{CC}+0.5V	V
	5.0V Product			
	Wide V_{CC}** Product			
Voltage on V_{CC} Supply Relative to V_{SS}	3.3V Product	V_{in}, V_{OUT}	-0.5 to 4.6	V
	5.0V Product		-0.5 to 7.0	
	Wide V_{CC}** Product		-0.5 to 4.6	
Power Dissipation		P_D	1.0	W
Storage Temperature		T_{STG}	-65 to 150	°C
Operating Temperature Commercial		T_A	0 to 70	°C
Industrial		T_A	-40 to 85	°C

*Stresses greater than those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operating sections of this specification is not implied.

Exposure to absolute maximum rating conditions for extended periods may affect reliability.

**Wide VCC Range is 1.65V~3.6V

Recommended DC Operating Conditions*(T_A=0 to 70℃)

Parameter	Operating V_{CC}(V)	Symbol	Min.	Typ.	Max.	Unit

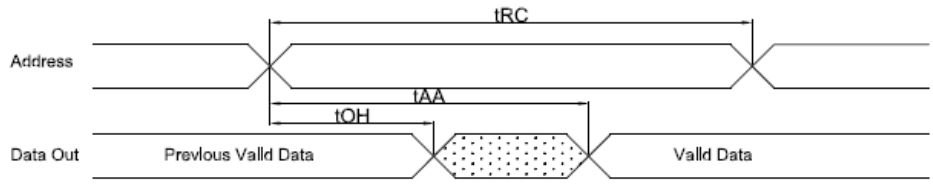
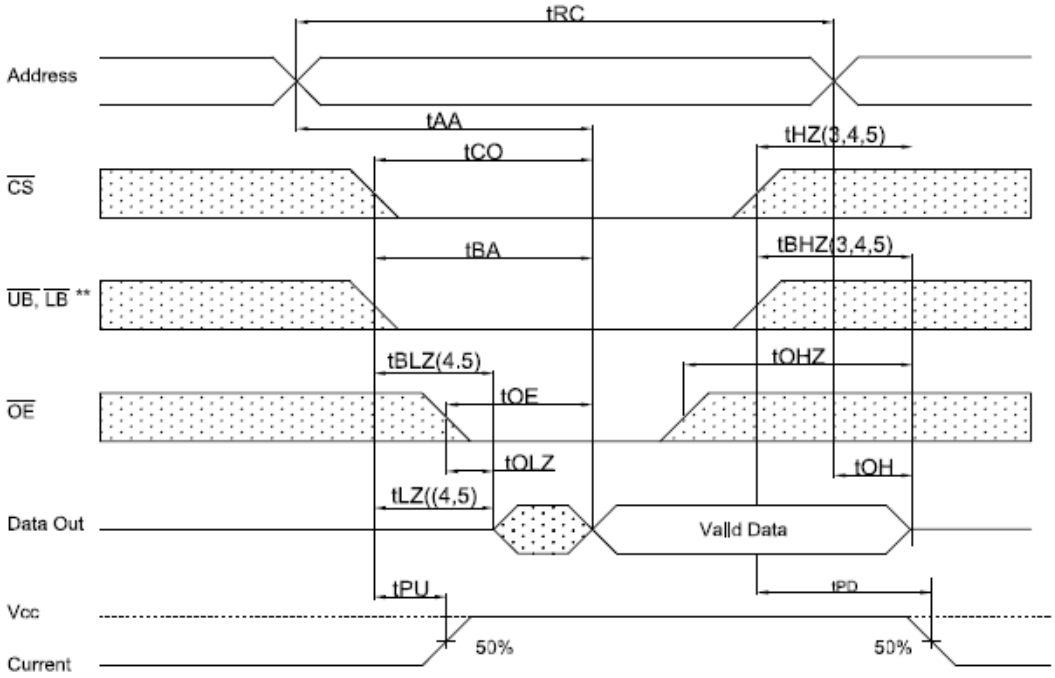
Timing Diagram

Timing Waveform of Read Cycle (1) (Address Controlled, $\overline{CS}$ = $\overline{OE}$ =V_{IL}, $\overline{WE}$ =V_{IH}, $\overline{UB}$, $\overline{LB}$ =V_{IL}**)



** Those parameters are applied for x16 mode only.

Timing Waveform of Read Cycle (2) ($\overline{WE}$ =VIH)

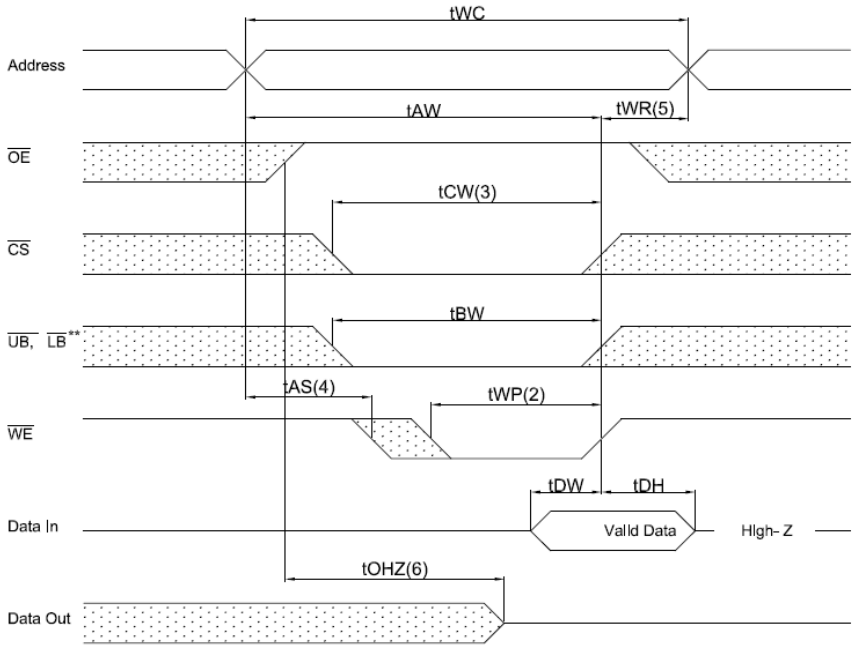


NOTES (Read Cycle)

1. $\overline{WE}$ is high for read cycle
2. All read cycle timing is referenced from the last valid address to the first transition address.
3. t_{HZ} and t_{OHZ} are defined as the time at which the outputs achieve the open circuit condition and are not referenced to V_{OH} or V_{OL} levels.
4. At any given temperature and voltage condition, t_{HZ} (Max.) is less than t_{LZ} (Min.) both for a given device and from device to device.
5. Transition is measured ±200mV from steady state voltage with Load (B). This parameter is sampled and not 100% tested.
6. Device is continuously selected with $\overline{CS}$ =V_{IL}.
7. Address valid prior to coincident with $\overline{CS}$ transition low.
8. For common I/O applications, minimization or elimination of bus contention conditions is necessary during read and write cycle.

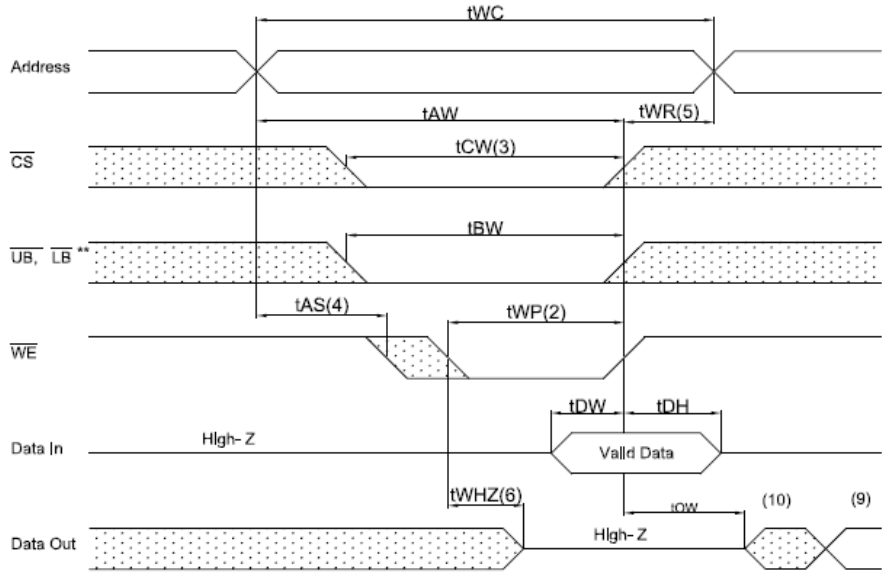
** Those parameters are applied for x16 mode only.

Timing Waveform of Write Cycle (1) ($\overline{OE}$ Clock)



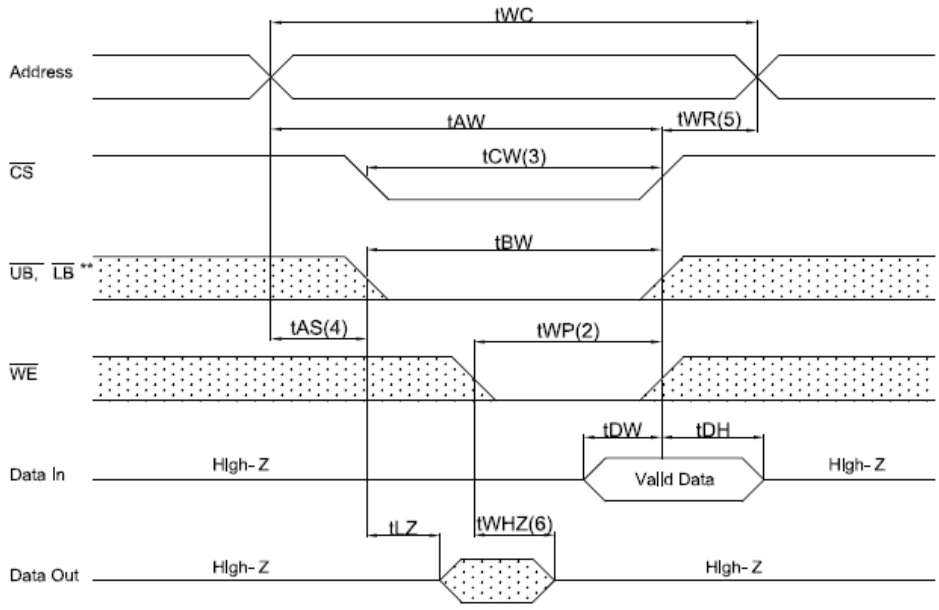
** Those parameters are applied for x16 mode only.

Timing Waveform of Write Cycle (2) ($\overline{OE}$ =Low fixed)



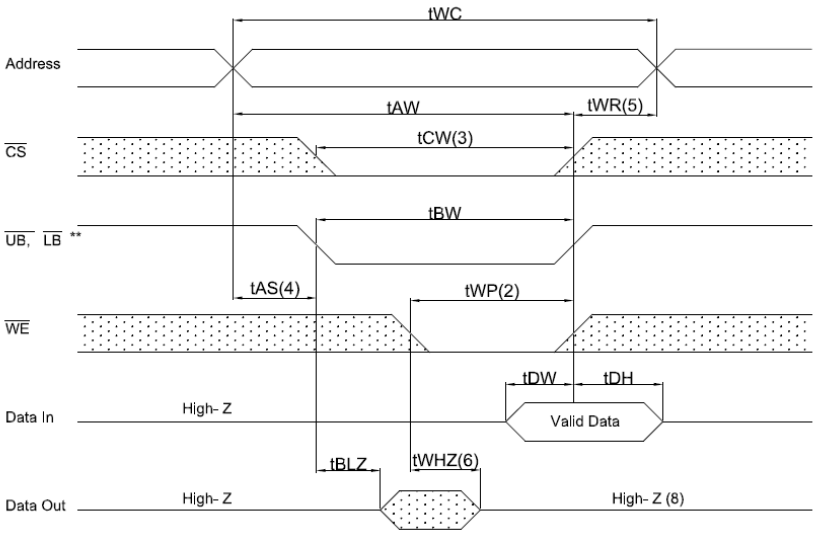
** Those parameters are applied for x16 mode only.

Timing Waveform of Write Cycle (3) ($\overline{CS}$ =Controlled)



** Those parameters are applied for x16 mode only.

Timing Waveform of Write Cycle (4) ($\overline{UB}$, $\overline{LB}$ Controlled)



NOTES (Write Cycle)

1. All write cycle timing is referenced from the last valid address to the first transition address.
2. A write occurs during the overlap of a low $\overline{CS}$, $\overline{WE}$, $\overline{LB}$ and $\overline{UB}$. A write begins at the latest transition $\overline{CS}$ going low and $\overline{WE}$ going low ;
   A write ends at the earliest transition $\overline{CS}$ going high or $\overline{WE}$ going high. t_{WP} is measured from the beginning of write to the end of write.
3. t_{CW} is measured from the later of $\overline{CS}$ going low to end of write.
4. t_{AS} is measured from the address valid to the beginning of write.
5. $\overline{WE}$ is measured from the end of write to the address change. t_{WR} applied in case a write ends as $\overline{CS}$ or $\overline{WE}$ going high.
6. If $\overline{OE}$, $\overline{CS}$ and $\overline{WE}$ are in the Read Mode during this period, the I/O pins are in the output low-Z state. Inputs of opposite phase of the output must not be applied because bus contention can occur.
7. For common I/O applications, minimization or elimination of bus contention conditions is necessary during read and write cycle.
8. If $\overline{CS}$ goes low simultaneously with $\overline{WE}$ going or after WE going low, the outputs remain high impedance state.
9. D_{OUT} is the read data of the new address.
10. When $\overline{CS}$ is low : I/O pins are in the output state. The input signals in the opposite phase leading to the output should not be applied.

** Those parameters are applied for x16 mode only
